

Open Access Fibre Networks for Residential & Commercial Buildings

fibrehood
Bridging the access gap

WHO IS FIBREHOOD

Fibrehood is a network facility services provider. We install Open Access FTTx networks in residential & commercial multi dwelling properties ('MDUs').

The FTTx network we install caters for all your current and future ICT connectivity demands;

- Broadband fibre (Wifi)
- Satellite TV (DStv / Openview etc. over fibre)
- Security (CCTV) systems
- Access control systems
-and many other future ICT services

Our installation is unique to other market offers in that it is **OPEN TO ALL INTERNET & SATELLITE TV SERVICE PROVIDERS** (ZOL, TelOne, Dande Mutande, MultiChoice, Openview etc.). We simply build our network infrastructure independent of the Service Providers on a shared infrastructure model so that once installed there is no need for any future installation works (Trenching, pipe laying, Satellite dish mounting etc.) by any other service provider.

We have over Ten (10) years' experience in the construction of Fibre-To-The Home / Business (FTTx) networks. Our expertise spans from design, installation, commissioning through to operation & maintenance. To date we have **connected 5000+ homes & businesses in all types of properties (Commercial buildings, Apartments, Cluster houses, Estates etc.)** on behalf of some of the leading operators in Southern Africa.

NETWORK OVERVIEW

Our solution involves the establishment of a central distribution point within your property, which hosts all Service Providers. This is usually in the server room, guard room, basement or rooftop. From this point a shared network (fibre cable etc.) is distributed to all floors and to the door of every unit. This is referred to as the 'Access Build', which involves trenching within the property to provide common access from the Operator's active network passing through your street to the building/s in the property.

The backbone of our network is fibre optic cable which is the most efficient mode of transmission at speed of light and with unlimited capacity – so efficient that it is considered future proof to the extent that it forms the backbone of future technologies – 5G, 10G etc.

The **GREAT NEWS** is that our Access Build is **FREE** i.e. no cost to the Home Owners Association or Property Owner, it is funded entirely by Fibrehood. (*Qualifying customers only). There is also **NO OBLIGATION** for sign-up by the Unit Resident / Tenant or Occupant.

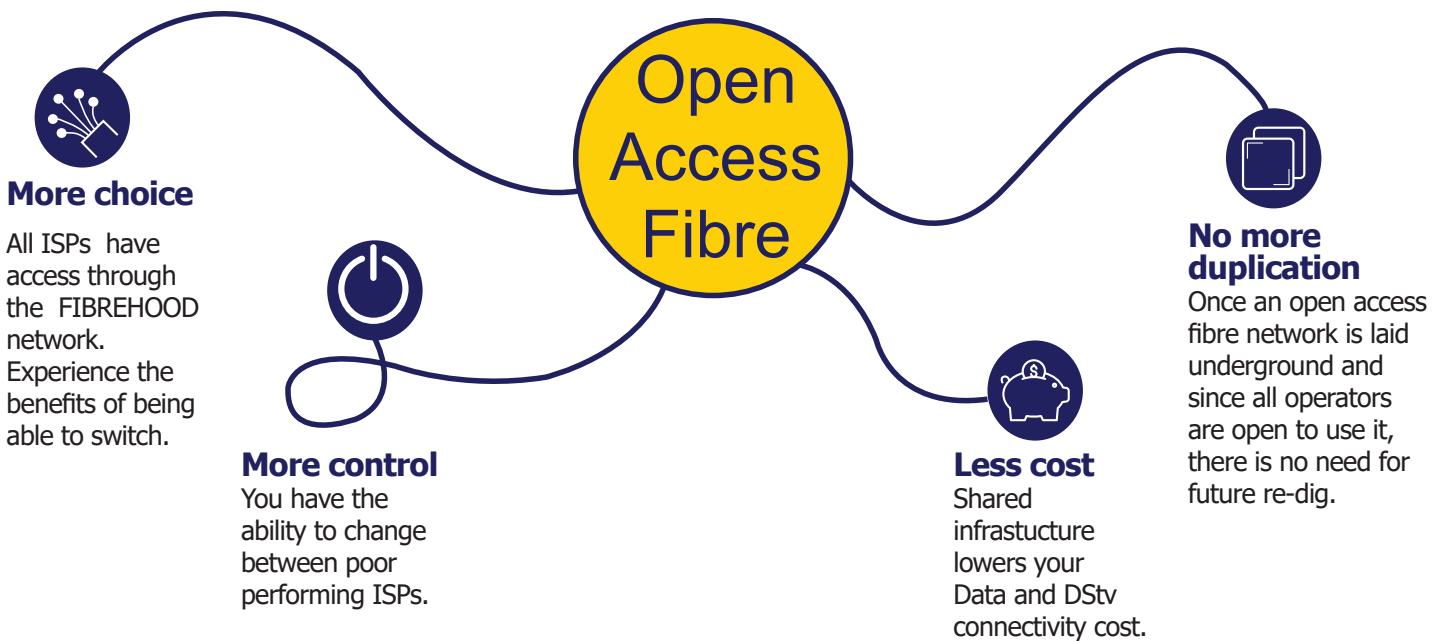

Increasing demand for seamless data means it is becoming critical to subscribe for unlimited data packages which cater for the whole family. An open access fibre network gives your community access to the lowest cost service provider.

WHAT DOES OPEN ACCESS MEAN?

It simply means that your network is open to all Service Providers to **complete to supply you with the best price & service offer**. We install the shared network infrastructure and they compete for your business. The value we bring to you comes from this separation of the infrastructure from the service.

“ We believe inclusive & affordable access for ordinary people enables them to achieve extraordinary things. ”

BENEFITS OF FIBREHOOD NETWORK

Stay safe with home monitoring & security system

Future ready smart home (Smart metering and IOT etc)

Reduced clutter of multiple satellite dishes, wall pipes, trunking etc.

Increase the value and rental income on your property

Reduced disruption from independent installations

Enable your Smart TV and its HD/3D features

Super-Fast Internet

Access high speed & quality Data and DStv

“ ICT connectivity has become an essential utility service just like water & electricity. ”

GET SATELLITE TV OVER FIBRE

No more need for multiple satellite dishes on your property. Experience many other benefits of this latest technology which is approved & recommended by MultiChoice Africa.

Higher quality DSTV service delivery (HD & 3D).

Lower installation cost (estimated 30-60% saving for subscriber).

Faster activation upon subscriber sign-up.

Single centralized dish on the building/property instead of multiple dishes.

MultiChoice approved & recommended solution.

Supports DSTV premium features.

Unaffected by bad weather and lightning strikes.

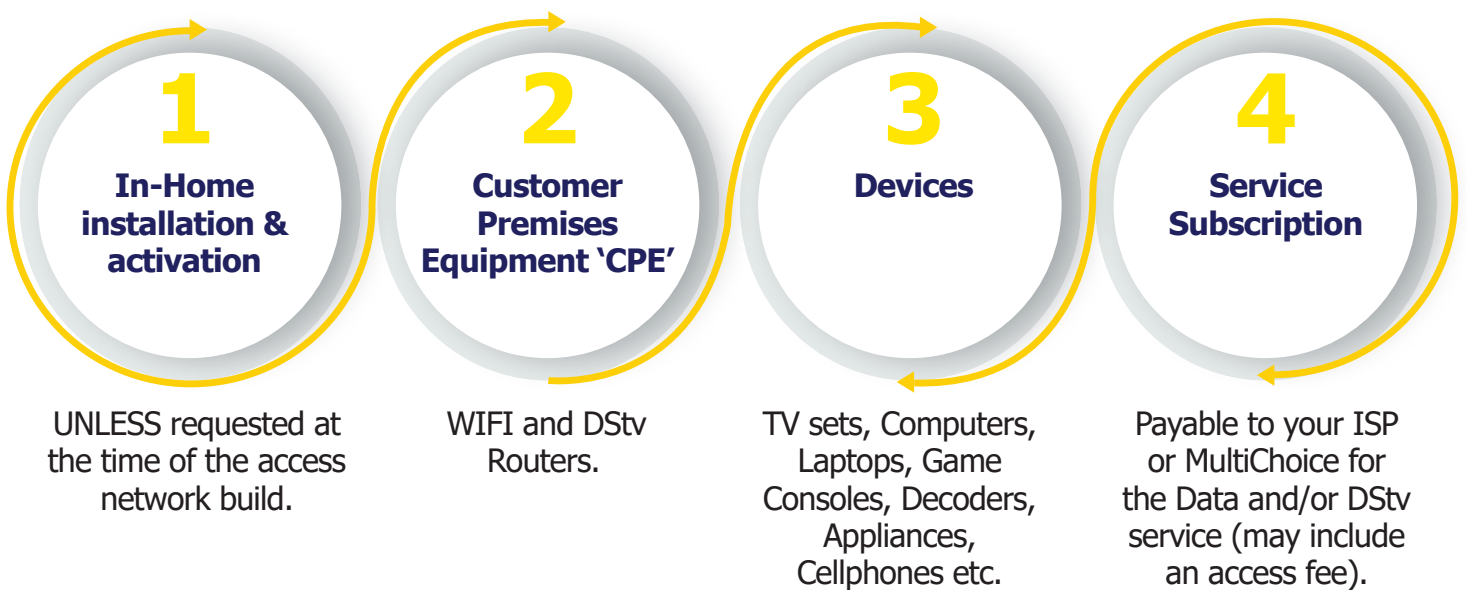

Reduced cable footprint in your home (Single fibre Instead of 4-5 coaxial cables).

WHAT IS THE COST?

- ✓ The Access Build is **FREE**
- ✓ **Survey & Quotation is FREE.**
- ✓ **NO OBLIGATION** for signup until you choose to subscribe for services.

Subscribers will pay for:

a) Internet (Data) Subscribers:

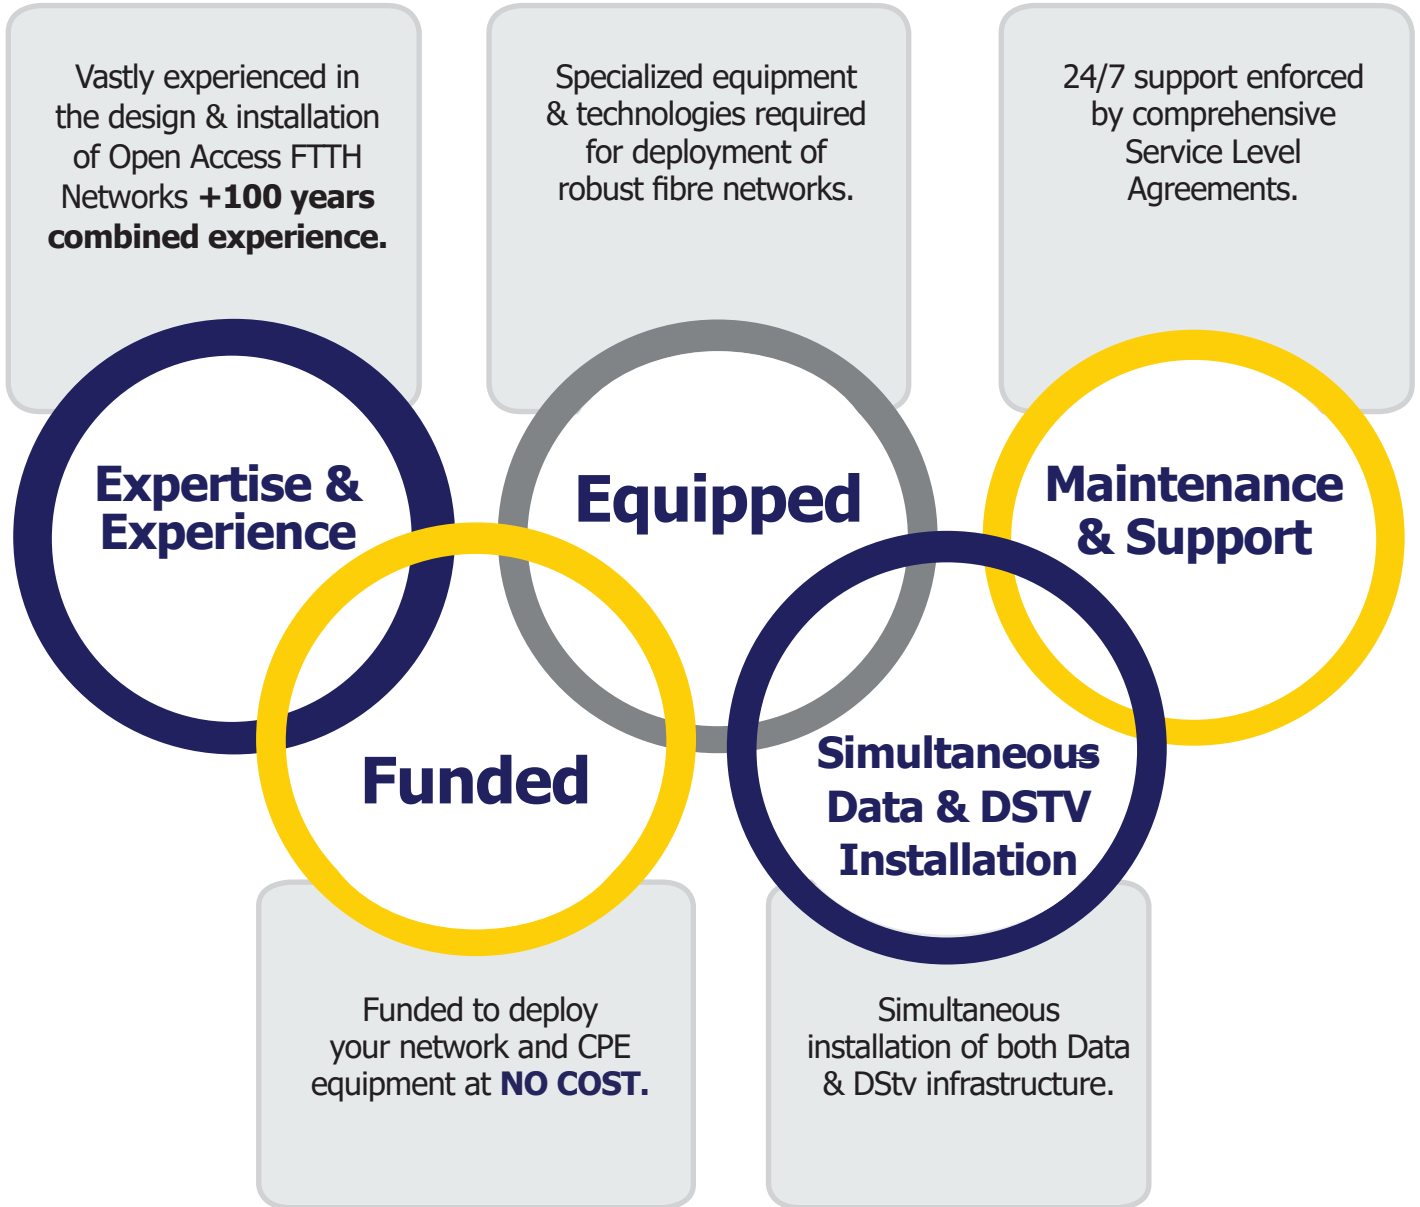

b) Satellite TV Subscribers:

In addition to 1-2-3-4 above, Subscribers will also pay a network access fee of +/- US\$5 per month or equivalent but avoid a costly outlay of +/- US\$120 for an independent satellite dish installation.

- ✓ Callout fees are charged for attendance to faults relating to non-access network infrastructure repairs, switching, configuration and activation.

WHY CHOOSE US?

THE INSTALLATION PROCESS

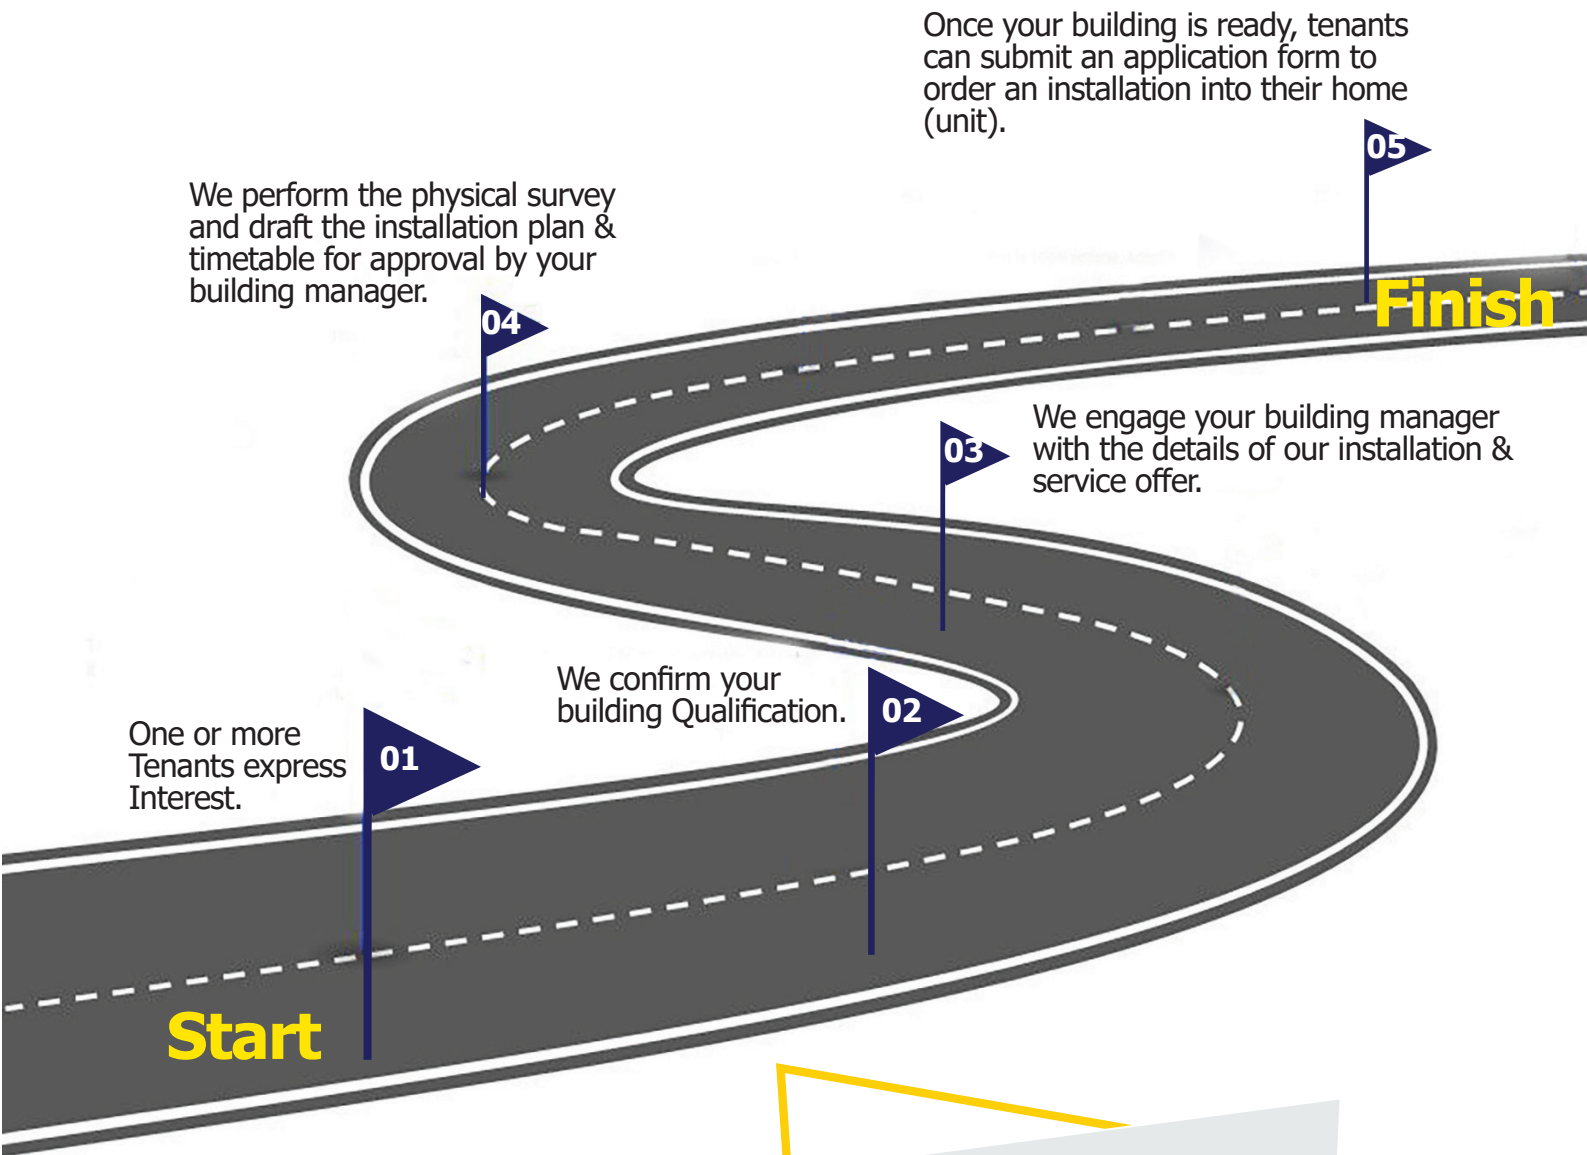

In order for us to provision fibre into your building we require authorisation & site access. The steps we follow are as follows:

Refer to our website to download our installation principles.

YOUR INSTALLATION JOURNEY

“ Recent rapid technology advancements are resulting in ever increasing demand for high speed, seamless & unlimited Data. You simply cannot afford not to have choice and ability to switch Service Provider to get best price & service! ”

FIBREHOOD READY!

Once your building is ready and upon subscribing for service, we schedule a convenient time to send an installation team out to reticulate the fibre from your door into your home (unit).

We will install a single cable and small fibre box (called a CPE device) and you are ready for service activation by your selected service provider.

Enjoy the benefits & endless possibilities of open access Data & DSTV fibre connectivity!.
